**Primus One<sup>®</sup>:**  
Elabo revolutionises  
the work table

# Primus One®:

## more room for your ideas

The Primus One® revolutionary work table is a true masterpiece, into which all of Elabo's knowledge and experience flowed. The first-rate qualities of Elabo's InForm and EcoTec product lines were retained and pushed even further. These have been combined with new features that make the Primus One® so unique.

The Primus One® represents the logical development of the successful InForm series. This technical work table unites everything that Elabo does best and has been proven to work well over the years, with many additional and improved functions: versatile, flexible, premium-quality and conceptually sophisticated in every detail.

ELABO GmbH sets the highest standards for its products. They must be easy to use, strong in application and of great benefit to users. The Primus One® receives top scores in all three areas. This technical work table facilitates daily work, allowing people to find time and space for their own ideas.

There's nothing left to be desired. Typically Elabo.

### Primus One®

The revolutionary work table with a new design, encompassing every possibility and plenty of room for your ideas.

An excellent infrastructure for devices with standard security – also when placing external devices.

# Primus One® 3HE

## Life is hard enough

The Primus One® 3HE exhibits the optimal use of the table surface – the devices are positioned on top. The table is height-adjustable, if desired – like all tables in the Primus One® line – and the entire unit is adjusted with it. The distances remain the same, whether you're sitting or standing at work.

All the operating surfaces are ergonomically inclined toward the user, allowing them to be used and read without any problems whatsoever. A further highlight is the removable table edge.

### No centimetre goes unused

Through optimal packing density, the storage space is fully utilised (configuration example).

# Primus One<sup>®</sup> 6HE

Even more  
new and improved functions

More size, more features, more power – that's what the Primus One<sup>®</sup> 6HE stands for. It can do everything the 3HE can do, and even more. A wide range of Elabo devices is available for use.

## The highlight

The 19" integration. Elabo devices as well as external and 3HE units harmonise and integrate seamlessly (configuration example).

# The Primus One<sup>®</sup> in detail

Ergonomics: made-to-measure work table

## Aiming high

Whether sitting or standing: height adjustment enables functional and ergonomic work – also retrofittable.

## Ergonomics at their best

The front table legs can be shifted as a standard feature – ensuring more legroom. The Primus One<sup>®</sup> fits directly and flush to the wall. Baseboards are not a problem.

## Tidy and clear

Extremely user-friendly and ergonomically perfect for all requirements: operating and connection elements face the user for faster and easier workflows. This creates room for the truly important things.

## Perfect illumination of the work area

Adjustable and features individual luminous colour in LED technology, energy-saving and durable.

## Electrical system: always well-supplied

### Easygoing

Electrification is also perfect below the table top, as the PC connections show. Upgrading accessories is just as simple: the slot nut can be inserted into the profile at any point. A clip holds the slot nut in the desired location.

### Optimal cable routing and efficient electrification

Individual power supply in the rear profiles without additional superstructures or device channels. All connection elements, including outlets, USB connectors, switches and sockets, remain within easy reach. Electrical protection with the safety box: easy to operate with maximum security.

## Functionality meets design

### Flexible and modular system

Individual configuration of the table based on the customer's personal preference; simple placement of external devices possible at any time.

### Nice and tidy

The PC is not in the way on the table, it is mounted underneath. Simply clever.

### Retractable cable flap

Larger storage spaces to the left and right, e.g. for monitors.

### Pleasing to the eye

The metal faceplates for system profiles are available in three basic colours or in your own favourite colour.

### Reinforced profiles

More stable than ever in proven Elabo quality.

### Adjustable table edge

Modern in appearance and interchangeable.

### Tables in rows

Placed in rows, the cables remain virtually invisible. They do not have to be placed on the floor, but wander from table to table in the cable tray.

### Multitalented orga-panel

Always a tidy workplace: extendable, lockable and a wonderfully clever storage unit for smaller items! The orga-panel has a clean look due to brush strips and provides a cable holder for perfect cabling. The lighting system is fully integrated and beneficial to the user.

### Well-engineered down to the last detail

Not only functional, but also visually stunning. The love for the product is visible here.

### Strong slot on the profile

The heavy-duty slot can be used universally for standard attachment parts, e.g. monitor bracket, lamps and accessories.

### Everything under control

The storage tray is a tool carrier that can be suspended in the profile system. A prime example of the superb Elabo accessories.

Working environments for people with ideas.
